Name and ST	Andile Khumalo, ST10483250
Module Name	Web Development GROUP1
Assignment	POE PART3
Lecturer	Rhulani Kobeni
course	Diploma in Software Development

ZENVORA AUTOMATIVE WEBSITE

Improvement and change document for part3

Improvement to part2 made in part 3

Area	Before	After
Unreadable text bug	The body gradient used background-attachment: fixed. On long pages, a white patch of the gradient sat behind some car cards, so their white names were invisible.	Fixed attachment removed so the gradient spans the whole page. Cards now have a solid dark background, so text is always readable.
Mobile friendliness	No viewport meta tag, so phones showed a zoomed-out desktop page and the media queries did not work properly.	<meta name="viewport" content="width=device-width, initial-scale=1.0"> added to every page.
Page titles	Generic one-word titles such as 'Home page'.	Descriptive, keyword-rich titles, e.g. 'Showroom | Zenvora Automative'.
Card layout	Grid cards stretched to equal height, leaving empty dark space under shorter cards.	align-items: start so each card fits its content.
Form markup	Labels were not linked to inputs and used tags for spacing.	Each input has a matching id and label for=, wrapped in a. field block, which also improves accessibility.
Password fields	No styling for new input types.	password and search inputs styled to match the other form controls.

Part 3 additions

JavaScript Functionality

- ☆ According on the Services page only service panel is open at time
- ☆ Image lightbox on the Showroom: click an image to view it large with the next/ previous buttons and ESC/ arrow-key support.
- ☆ Interactive Leaflet map on Contact Us showing the company address with a link to open it in Google Maps.
- ☆ Scroll animation: About Us section fade and slide in using intersection Observer and CSS transitions.
- ☆ Dynamic contact: Showroom vehicle card are generated by JavaScript from a data array instead of being typed into the HTML.
- ☆ Search and filter: live search by vehicle name and a filter for in stock, Reserved or sold with a result count.
- ☆ Status badges and an Enquire about this vehicle button on every car which opens the enquiry form with that vehicle pre-selected.

Form and validation

- ➢ New page enquiry.html: choose a service a vehicle or a sponsorship/ volunteering; the second drop down is filled by JavaScript and after validation the page shows a response with an estimated cost or the vehicle availability.
- ➢ Contact Us form: validates name, email, South African Phone number, subject and message length with an error message under each field. Valid messages are compiled into an email and opened in the visitors email app(mailto). An optional fetch/AJAX path is included for use with a form service such as Formspree.

Register and login (js/auth.js, register.html.login.html)

- ❖ Registration checks name, email, password strength (8+ characters a letter and number) and matching confirmation and reject duplicate emails.
- ❖ Password are salted and hashed (SHA-256) before being stored and never kept as plain text.
- ❖ Login and sign-up button sit in the top right of every page; after signing in they become a greeting and a logout button.
- ❖ All pages remain open to visitors. A protected_page list in auth.js can lock chosen pages.
- ❖ Limitation: with no server account are stored in each visitor's own browser, so this is demonstration rather than real security.

SEO

- ✓ Unique meta description and meta keywords on every pages; clear title tages.

- ✓ Headings structured with one H1 per and H2/H3 beneath; descriptive alt text on images.
- ✓ Internal links through the navigation bar and in-text links like for example Services links to the enquiry form.
- ✓ Robots.txt and sitemap.xml added at the site root.

FILES ADDED

Area	Before	After
CSS/style.css	Created in Part 2	Extended in Part 3 with accordion, lightbox, map, form-message and login styles; background bug fixed.
js/script.js	Did not exist	New: all interactive features, dynamic Showroom, form validation, map.
js/auth.js	Did not exist	New: register, login, logout and the optional page gate.
enquiry.html, login.html, register.html	Did not exist	New pages.
Home, About Us, Services, Showroom, Contact Us	Inline-styled pages	Linked to the stylesheet and scripts; SEO tags, nav links and new features added.
robots.txt, sitemap.xml, _headers, README.md	Did not exist	New SEO, security and documentation files.

KNOWN LIMITAIONS AND NEXT STEPS

- Vehicle names, prices and service cost ranges in js/script.js are placeholders and should be replaces with real data.
- The map pin location is approximate and should be fine-tuned with exact coordinates.
- Contact messages open the visitor's emails app; true background sending needs a form endpoint such a formspree.
- Responsive images use fluid CSS only; srcset would need several sizes of each photo.
- The site still needs to be deployed GitHub pages and the sitemap domain updated to the live address.
